

# COLEGIO BAYARD

## Mission to Mars

### Stage 2: Crew

- Engineer and pilot : Luca Ramón Smith Pelegrin
- Geologist: Santiago Alan
- Biology and formal scientist: Benito Suárez Messina
- Medicine and psychologist: Lucas Meriggi
- Astronomer: Jonás Gotlib
- Physicist and Chemist: Pablo Osuna

We chose an engineer and pilot because we want someone who knows how to drive the rocket and if it fails, knows how to fix it.

We chose a Geologist because when we land on Mars we have to examine the planet, the minerals and the soil.

We chose a Medic and a psychologist because we could get sick or we could get hurt by exploring Mars and a Psychologist because being two years isolated in a rocketship we could try to kill each other or even kill ourselves.

We chose a biologist because it's necessary to have a person that studies life on Mars and how Mars can affect our lives and our health.

We chose formal science because that science studies mathematics and computer science. That is necessary because maybe the engineer needs help or something related.

We chose a physicist and chemist because we need someone that investigates the laws of physics and chemicals of the planet.

We chose an astronomer because we need someone that knows about space and in which part of the space we are traveling.
